Sir:

AMENDMENT

This Amendment is in response to the Office Action dated July 13, 2004. Please amend the Brief Description of the Drawings and the Specification of the application as follows:

Amendment to the Brief Description of the Drawings is reflected on page 2 of this paper.

Amendment to the Specification is reflected on page 3 of this paper.

Appl. No. 09/023,556
Amdt. dated 7-20-2004
Reply to Office Action of July 13, 2004

Amendment to the Brief Description of the Drawings:

Figure 7 - Cancel

BRIEF DESCRIPTION OF THE DRAWINGS

Figure 1 - is a flow chart of the total voting system.

Figure 2 - is a flow diagram of the start-up of the voting system.

Figure 3 - is a flow diagram of the election and precinct setup.

Figure 4 - is a flow chart showing the summary of the voting with and without a poll worker station.

Figure 5 - is a depiction of the first page of a ballot.

Figure 6 - is a flow chart of the voting procedure with this invention.

DETAILED DESCRIPTION OF THE INVENTION

The voting system uses either single or multiple voting stations, each station having at least one voting device which may be stored in a transport case. Each transport case or unit will have numbered seals that will be checked out to particular precincts for use with voting stations.

Once the poll workers arrive at the polling place with the voting stations they will remove the voting unit or units from the transport cases and place the voting stations or units inside each voting booth. The voting station comprises a computer with program graphical unit including a user interface for displaying ballots and other information the requisite computer programs for recording are within the unit.

Each voting station may have its own power source or there may be a single source for several stations and each voting station requires at least one election security card which is normally provided by the election authority in a sealed security envelope. Poll workers must insert the election security card in each voting device to permit operation.

Once the power has been connected to the voting station and the election security cards installed the power may be turned on for each voting station. When the voting stations or devices are turned on the units will work for a short period of time then displays the number of devices that are being connected in the precinct for confirmation. Once this question is answered, the units will work for a short period of time. Figure 2 is the flow chart for starting
